PROFESSIONAL SUMMARY

Computer Science student with experience in full-stack development and machine learning, including implementing REST APIs, deploying scalable data pipelines with PySpark, and developing NLP-based applications. Background in IT and networking with hands-on experience in system configuration and troubleshooting. Seeking a software or AI engineering role.

EDUCATION

University at Buffalo

August 2022 – May 2026

Bachelor of Science in Computer Science, Minor in Coaching

Buffalo, NY

Master of Science in Computer Science & Engineering

EXPERIENCE

University at Buffalo

September 2024 – Present

Network & Communications Student Assistant

Buffalo, NY

- Install, maintain, and troubleshoot campus wired and wireless networks supporting thousands of users.
- Configure Cisco switches and wireless access points.
- Terminate cabling, activate ports, and perform network diagnostics.
- Conduct wireless site surveys to optimize coverage and reduce connectivity issues.

Upstate Niagara Cooperative, Inc.

June 2023 – August 2024

IT Intern

Lancaster, NY

- Provided IT support across multiple facilities in a corporate manufacturing environment.
- Troubleshooting hardware/software issues for computers, printers, phones, and laptops.
- Managed IT asset database and supported asset tracking processes.
- Deployment of company-wide user cloud-based service (Microsoft Azure AD).

PROJECTS

AI House Search Platform | NLP (Qwen), React, Python, JavaScript, SQL (Neon), REST API

Spring 2026

Project Development

CSE 611

- Developed a full-stack AI-powered housing search platform using React, FastAPI, and PostgreSQL (Neon)
- Implemented user features including login, projects, favorited properties, onboarding, and personalized result ranking.
- Developed REST API endpoints using FastAPI to handle user and property data.

Static Code Analyzer | BERT, Docker, Python

Fall 2025

Software Security

CSE 518

- Created a static code analyzer using a BERT-based model to detect security vulnerabilities in source code.
- Containerized the application with Docker for consistent deployment and execution
- Experience in documenting/testing security faults in applications such as injection, ddos, phishing, etc.

Hospital Feature Analysis | Python, scikit-learn, NumPy, PySpark

Spring 2025

Award: Runner-Up Project

CSE 587

- Semester long project in Data Intensive Computing applying machine learning algorithms to a large-scale hospital dataset.
- Used exploratory data analysis (EDA) to extract useful features, performed various machine learning algorithms on data to learn trends, and leveraged PySpark to test scalability of results.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, SQL
- **Frameworks & Libraries:** React, FastAPI, scikit-learn, PySpark
- **Machine Learning & AI:** Natural Language Processing (NLP), BERT, Feature Engineering, Model Evaluation
- **Data & Databases:** PostgreSQL (Neon), Pandas, NumPy
- **Tools & Technologies:** Docker, REST APIs, Fluke Network Tester
- **Networking & Systems:** Cisco Networking, Structured Cabling, Port Activation, Wireless Access Points
- **IT & Cloud:** Asset management, System Deployment, Workstation setup, Azure AD

ADDITIONAL STRENGTHS

- Creative Problem Solving
- Strong Communication Skills
- Team Leadership & Coaching
- Ability to Learn Quickly in Technical Environments
